Subject: BRC: Stop making radwaste; start taking scientifically-sound decisions

Dear Commission members

As part of International Action Day on Radioactive Waste, I wanted to share some of my recommendations for U.S. radioactive waste policy:

My SUPERFUND SITE, UNIONTOWN IEL , IN UNIONTOWN , OHIO IN A HIGHLY POPULATED AREA, has US EPA ""validated"" Plutonium levels comparable to the Nevada Test Site, and nearly 2,000 greater than groundwater at Hanford, WA. but US EPA , DOE, and DOD refuse to do anything to clean up this site, allowing it to continue to flush daily into our area's sole source drinking water used by up to 600,000 people.

PLEASE VISIT our group's website: <http://www.afsc.net/cclt/index.htm> , See bottom of green home page, for links to front page articles, letters and reports. IEL is a KEY example of WHY nuclear must not be increased. The government will do nothing once it is out there, but deny and deny....We would appreciate talking further to Committee Members about our case, a truly worst case scenario swept under the rug...

Sincerely,

Chris Borello _ president, Concerned Citizens of Lake Twp./IEL Superfund Site, Ohio 330-499-5207
